What is ElectroDermal Screening (EDS) / Stress Reduction Therapy (NanoSRT)?

ElectroDermal Screening and/or NanoSRT, technology used to assess and balance the meridian and energy systems of the body. The meridian system has been acknowledged around the world for over 5,000 years ~ we now use Bio-Energetic screening as an effective tool in addressing many health issues (*see the following list*). Your brain and body communicate internally by way of cellular communication and energy pathways corresponding to all organs, tissues and systems of the body. Other modalities such as acupuncture, acupressure and reflexology are also based on the meridian/energy system(s).

In the early 1990's, Dr. William Tiller at Stanford University in Palo Alto, California, became interested in EDS and spent several years researching the information that can be obtained by its use. Under his direction a study was performed to determine if in fact the meridian end points really correspond to the various organs and tissues, as the ancient Chinese had found. To determine this they injected the end points on the fingers and toes with a radioactive isotope tracer and followed the path of the tracer. Sure enough, the tracer followed the meridian energy tracts directly to specific organs or tissues just as had been outlined by the Chinese several millenniums ago.

The National Institute of Health concluded:

“In clinical practice Bio-Energetic Medicine (EDS) offers the possibility of more economically effective evaluations and non-invasive therapies for health problems, including those considered infractible (violating the body) or calcitrant (not responsive) to conventional treatments”.

N.I.H. Panel Report, January 14, 1993

Health challenges effectively balanced (*not all inclusive*) with EDS/NanoSRT:

Food allergies/sensitivities	Environment/chemical sensitivity	Asthma
Sinusitis	Headaches/Migraines	Bronchitis
Fibromyalgia	Herpes	Candida
Chronic Fatigue	Thyroiditis	Colitis
Crohn's Disease	Dysmenorrhea	PMS
Interstitial Cystitis	Vaginitis	Endometriosis
Amenorrhea	Infertility	Fibrocystic Breasts
Ovarian Cysts	Menopause	ADD/ADHD
Ear Infections	Autism	Eczema
Childhood Diseases	Vaccinations	Chronic Fungus/Yeast

AND MANY OTHERS!

Frequently Asked Questions

How is EDS/NanoSRT performed?

This scan is painless and non-invasive. Someone that is very ill may feel slightly fatigued during or after the scan.

How long does it take?

Approximately 7-15 minutes for screen and balance.

Is it FDA approved?

Yes, the EDS is registered with the FDA as an approved galvanic skin resistance device under guidelines governing medical testing devices.

Is it safe?

Yes, there are less than 2.5 millivolts of current utilized by EDS. No chemicals, radiation, punctures or body fluids are used during the procedure.

Can it be used on children?

Yes. It is even safe for infants!
